

Data Grid – Sequence Number

2018 Q4

Summary

Easily add a sequence number column into a Data Grid.

Although previously achievable via an Expression, an option has been added that allows you to quickly and easily add a sequence number column into a Data Grid, allocating a row number to each individual record.

To add the column, from the Data Grid tool bar:

- Select  **Add User Code**

In the window that opens:

- Enter the column **Heading Description** – e.g. Row No.
- Click to select the **Row Number (starting from)**
- Enter the number from which you wish to start the sequence, click **Add** and then build

A new column is inserted into the display and each row allocated its own sequence number.

| DUNS | Business Name | Town | Row Number |
|-----------|----------------------|------------------|------------|
| 210004... | Soltys Brewster... | Penarth | 1 |
| 210008... | The Daily News | Liverpool | 2 |
| 210012... | Armstrong Worl... | Uxbridge | 3 |
