

Interface Changes

Summary

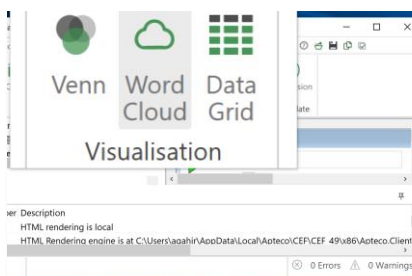

Introducing DPI scaling to give the User a better UI experience, as well as reintroducing colour variable icons for quicker recognition.

Market Insight is now a fully DPI (Dots Per Inch) aware application. Previously, using Market Insight on a device that did not have a 96 DPI screen led to blurriness and reduced screen space. Now with DPI scaling in place, users have a clean/crisp UI (User Interface) and increased workspace.

To illustrate this change the following screen shots are shown zoomed in to a view running at 200%.

Market Insight Q4 2017

Market Insight Q1 2018

Colour has been reintroduced to the variable icons in the System explorer, to aid in quicker recognition and searches.
